

## Data Scientist (m/w/d) Decarbonization Solutions

Do you have a passion for climate data and have first practical experience from quantitative analyses? Are you excited about applying your data skills to corporate solutions for decarbonization and CO<sub>2</sub> management? Then this position might fit.

### You are:

- Data-scientist with confident use of various digital tools and programming languages to convert, process and analyze (big) data
- Analytical thinker who can break down climate data into actionable results in companies in industry, energy, buildings, transport and/or agriculture & forestry
- Interested in technical issues related to carbon pricing (such as CO<sub>2</sub> taxes, cap-and-trade, CBAM), carbon markets (compliance or voluntary) and/or CO<sub>2</sub> reporting (e.g., GHGP, ISO, SBTi, CDP)
- Clear and fluent communication in English and German language to explain data results and technical methods
- Structured and independent in the management of your tasks and project modules – as demonstrated in previous roles

### You want:

- New challenges where you can help shape the product and solutions of a growing company in the data science and climate-space
- A technical role that you can form and expand into a sought-after expert on technical aspects related to carbon markets and reporting
- Independent work with full ownership of your tasks and project modules and freedom to develop new products and solutions
- A flexible role (based in Berlin), in which you can arrange your working hours and location(s) to fit your personal needs
- A dynamic and collaborative work environment where diversity, openness and trust are our core values

### We offer:

- Fully integrated business areas offering advisory and analytics for climate strategy, carbon reporting and certificate management
- Full responsibility to drive data analyses and solutions and inform project delivery

- Opportunities to grow with us and take on project lead roles in close interaction with our leadership team
- Insights into the joys and pitfalls of starting a business
- A hybrid work environment with a working space at the heart of Berlin-Kreuzberg
- A startup-competitive fixed salary with a performance-based bonus

## We are:

- A boutique advisory and analytics company that makes the economics of carbon count
- Strategic enablers of decarbonization journeys and CO2 management in all net-zero relevant industry and market segments
- Data-driven analysts who bring together business-relevant data on climate policy, carbon pricing and green markets
- Trusted advisors who make tailored solutions from overarching corporate strategies to optimization tools
- A growing team with a track-record in management consulting, energy industry, (angel) investments, and international climate policy (UN and World Bank)

## Is there a fit?

Then email us your CV via [hr@co2iq.de](mailto:hr@co2iq.de) and we arrange a first (virtual) chat to get to know each other. More info at [www.co2iq.de](http://www.co2iq.de). Please understand that we can only answer candidates with matching profiles.
